Optimise your business

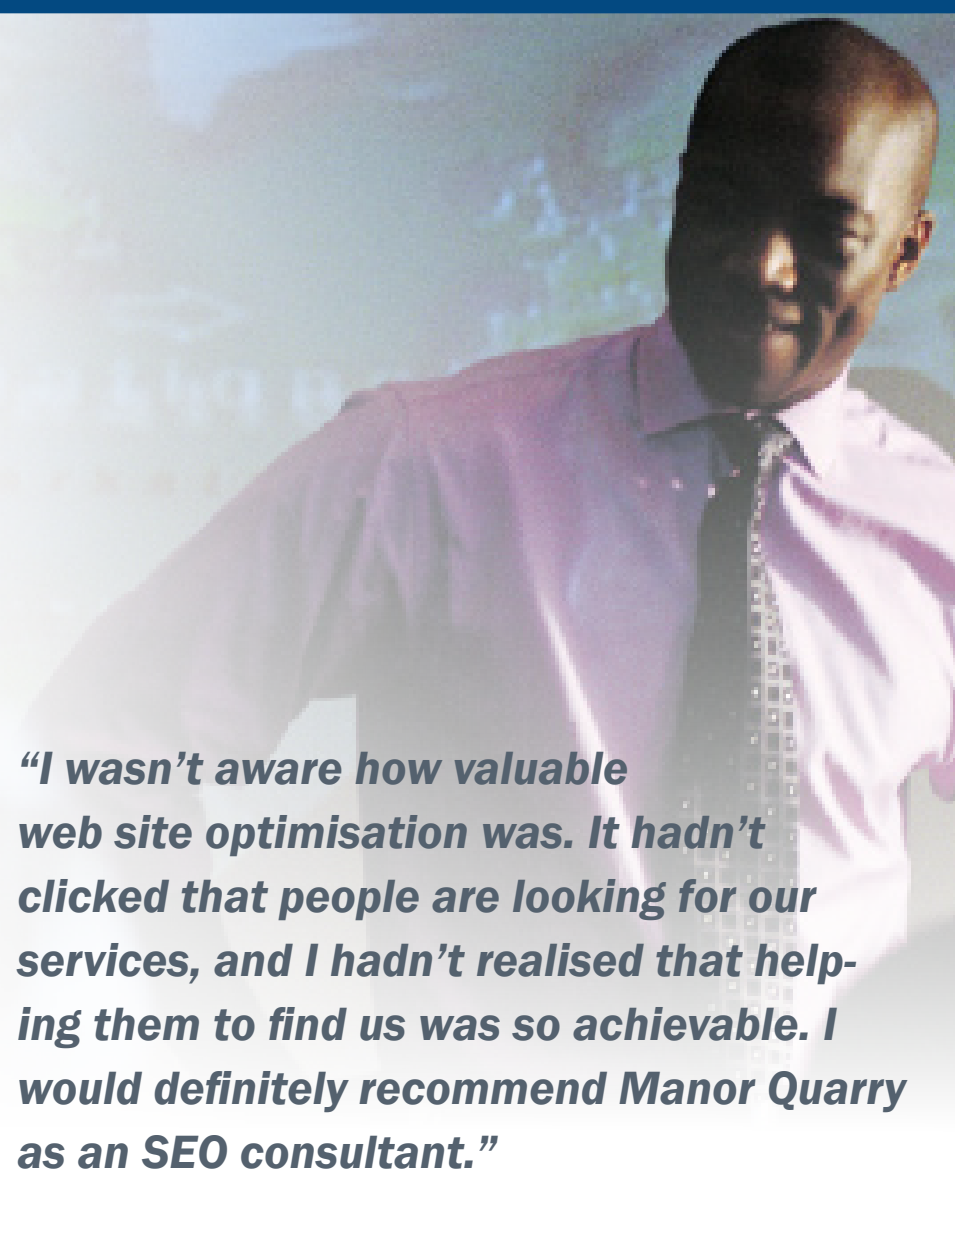

At Manor Quarry we are a highly experienced and diverse team, and we love what we do, placing huge value on our quality of service.

Brand Distribution

We provide a complete range of services to generate online sales in foreign markets for customers whose only required input is to supply stock. We then act as a brand distributor selling your products and sending the profits back to you. As well as a highly effective online solution, we also provide web marketing strategy, fulfilment services and customer support.

Ecommerce

Our package allows businesses to control their web site content from within Microsoft Dynamics NAV (formally Navision). Includes all the features you need to attract and effectively close customers in a highly efficient, dynamically changeable, ecommerce web site. Our consultative approach to understanding the needs of you and your customers ensures that the focus remains on process efficiency and to increase sales: not just on delivering a technology solution. It supports multiple branded web sites, with SEO built in, and is available either to buy and install, or to rent as a hosted ecommerce software service.

“I wasn’t aware how valuable web site optimisation was. It hadn’t clicked that people are looking for our services, and I hadn’t realised that helping them to find us was so achievable. I would definitely recommend Manor Quarry as an SEO consultant.”

Optimise your business

Content Managment

We reckon our hosted Content Management System with monthly optimisation costs no more than a single day's consultancy from a typical expert SEO pro, but our package includes the consultancy, the software, the web hosting, and a system that makes applying optimisation recommendations easy for anyone to do.

Web Site Optimisation

Manor Quarry provide internet marketing services, including search engine optimisation (SEO), to help improve search engine rankings and increase web site traffic. We will improve your search engine rankings, making your site more visible and prominent, and increase web site traffic and therefore revenue.

Microsoft Sharepoint

Both people and systems enthusiasts, we have a passion for optimizing business processes, through well-engineered information and communication systems. Using Microsoft SharePoint means that no matter where an organization's people are, connected or offline, everyone has access to the latest view of the information they need.
